Summary

MCA graduate with hands-on backend engineering experience using Flask and Spring Boot. Built JWT-secured REST APIs, Redis-cached services, and asynchronous Celery pipelines across multiple end-to-end applications. Qualified GATE 2026 in Computer Science (CS). Actively seeking software engineering roles.

Education

Indian Institute of Technology Madras Diploma in Programming, IIT Madras BS Degree Program CGPA: 7.45	2024 - 2026
Sant Gadge Baba Amravati University Master of Computer Applications (MCA) CGPA: 8.22	2023 - 2025
Sant Gadge Baba Amravati University Bachelor of Commerce (B.Com) CGPA: 7.90	2020 - 2023

Skills

Programming Languages: Java, Python, JavaScript (ES6+).

Frontend: Vue.js, Vuex, HTML5, CSS3, Responsive Web Design.

Backend: Spring Boot, Flask, REST APIs, JWT, Celery, Redis.

Database: MySQL, PostgreSQL.

DevOps & Tools: Git, GitHub, Docker, CI/CD (GitHub Actions), AWS (EC2, S3).

Core CS: OOP, Data Structures & Algorithms, DBMS, Operating Systems, System Design.

Work Experience

Softronix Pvt. Ltd., Amravati Software Trainee	Jan 2025 - Jun 2025
- Integrated REST APIs using Spring Boot, implementing controllers, multithreaded services, and secure endpoints for internal systems. - Implemented CI/CD workflows using GitHub Actions to automate build and deployment processes. - Optimized SQL queries and schema design for internal service databases, reducing API response time by ~15%. - Diagnosed and resolved backend bottlenecks, improving reliability and stability across internal APIs.	

Projects

The Placement Route GitHub	May 2026
Tech Stack: Flask, SQLAlchemy, PostgreSQL, Redis, Celery, JWT, REST APIs	
- Built a scalable Flask backend with SQLAlchemy, modular architecture, and optimized schema design. - Implemented JWT-based authentication with RBAC to secure access across multiple user roles. - Optimized API performance using Redis caching and query tuning, reducing average API response time by ~20%. - Integrated Celery to offload asynchronous email processing and report generation from request workflows. - Structured the codebase using service-layer separation across three user roles (Student, Company, Admin), improving modularity and maintainability.	
V-park GitHub	May 2025
Tech Stack: Flask, SQLAlchemy, JavaScript	
- Developed a full-stack vehicle parking system featuring real-time slot availability, booking workflows, and payment integration. - Designed backend services for booking and slot management with optimized database schema design. - Optimized database queries and indexing, improving query performance and system responsiveness by ~30%. - Structured the backend into distinct service and data layers, separating booking logic, slot management, and payment handling for easier testing and maintainability.	
Film Fiesta - Movie Booking WebApp GitHub	Feb 2024
Tech Stack: Spring Boot, MySQL, JavaScript	
- Built a movie ticket booking platform using MVC architecture with seat selection, payments, and dynamic showtime management. - Handled transactional consistency for seat locking and payment rollback using database-level constraints.	

Certification and Achievements

- Solved 150+ LeetCode problems covering Arrays, Trees, Graphs, and Dynamic Programming using Java.
- Qualified GATE 2026 in Computer Science and Information Technology (CS & IT).
